

The trailing eighth of the attack trace is also discarded (plant shutdown); the remaining 7/8 forms the 51,453-timestamp evaluation window of Chapter 5.

Figure 2.9: Structure of the SWaT collection campaign and the two truncations applied in this thesis. Seven days of uninterrupted normal operation provide the unlabelled training set; the following four days contain the 36 attacks and provide the test set. The hatched block at the start marks the initialisation transient that is removed because it does not represent steady-state behaviour.
